## DETAILED ACTION

### ***Claim Rejections - 35 USC § 102***

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Claims 1-24 are rejected under 35 U.S.C. 102(e) as being anticipated by Wu, (US 6,151,644) cited as prior art 6/2/05.

As per claims 1-24, Wu teaches a method for managing a memory in a data processing system having a processor, comprising the steps of:

- (a) transferring data structures to and from an outside device (data network) and to and from the memory by circuitry in a background memory manager (BMM) [buffer memory manager of packet buffer, 10, Fig. 1, 2];
- (b) determining by the BMM each data structure from the outside device will fit into available space in the memory;
- (c) deciding by the BMM exactly where in the memory to store each data structure; and

(d) updating a memory state map associated with the memory in the BMM

each time a memory transaction is made. (Abstract, col. 2, lines 20-62, cols.3-6)

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-24 are rejected under 35 U.S.C. 102(b) as being anticipated by Walls, (US 5,675,790) cited as prior art 12/12/05.

As per claims 1-24, Wu teaches a method for managing a memory in a data processing system having a processor, comprising the steps of:

(a) transferring data structures to and from an outside device (data network) and to and from the memory by circuitry in a background memory manager (BMM) [buffer memory manager of packet buffer, 10, Fig. 1, 2];

(b) determining by the BMM each data structure from the outside device will fit into available space in the memory;

(c) deciding by the BMM exactly where in the memory to store each data structure; and

(d) updating a memory state map associated with the memory in the BMM

each time a memory transaction is made. (Abstract, cols. 5-9)
